Allowance

1. Acknowledgment is made of applicant's Amendment, filed 09 November 2005.

The changes and remarks disclosed therein were considered.

2. Claims 1, 8, 10, 16 and 19 have been canceled.
3. Claims 2-7, 9, 11-15 and 17-18 are pending in the application.

Drawings

4. The corrected or substitute drawings were received on 09 November 2005.

These drawings are acceptable.

Information Disclosure Statement

5. Acknowledgment is made of applicant's Information Disclosure Statement (IDS) Form PTO-1449, filed 09 November 2005. The information disclosed therein was considered.

6. Claims 2-7, 9, 11-15 and 17-18 are allowance.

The following is an examiner's statement of reasons for allowance:

There is no teaching or suggestion in the prior art to provide:

“a positive supply voltage coupled to the magneto-resistive random access memory circuit so as to allow current to flow through the magneto-resistive random access memory circuit when an activation signal is applied to the gate by the control circuit wherein the control circuit comprises a voltage regulator that

regulates a voltage level at the gate, so as to limit an amount of current flowing through the n-channel transistor and the magneto-resistive random access memory circuit ” in a word current source for a magneto-resistive random access memory circuit as claimed in the independent claim 2. Claims 3-7 are also allowed; or

“a positive supply voltage coupled to the magneto-resistive random access memory circuit so as to allow current to flow through the magneto-resistive random access memory circuit when an activation signal is applied to the gate by the control circuit wherein the control circuit comprises a stabilization amplifier comprising a logic control having a read/write input and an on/off input and a write reference gate control signal and a read reference gate control signal” in a current source for a magneto-resistive random access memory circuit as claimed in the independent claim 9; or

“a positive supply voltage coupled to the magneto-resistive random access memory circuit so as to allow current to flow through the magneto-resistive random access memory circuit when an activation signal is applied to the gate by the control circuit wherein the control circuit comprises means for regulating a voltage at the gate so as to limit the amount of current flowing through the cmos n-channel transistor and the magneto-resistive random access memory circuit” in a word current source for a magneto-resistive random access memory circuit as claimed in the independent claim 11. Claims 12-15 are also allowed.

OK 1/23/06

“a positive supply voltage coupled to the magneto-resistive random access memory circuit so as to allow current to flow through the magneto-resistive random access memory circuit when an activation signal is applied to the third terminal by the control circuit wherein the control circuit comprises means for regulating a voltage level at the third terminal so as to limit the amount of current flowing through n-channel semiconductor device and magneto-resistive random access memory ^{circuit} ~~unit~~” in a word current source for a magneto-resistive random access memory circuit as claimed in the independent claim 17. Claim 18 is also allowed.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
